

Primal

Primal is the first delegated blockchain that provides multi-chain features with seamless cross-chain DeFi ecosystem which allows instant in-chain (Primal) swap/conversion.

Framework

Plater

Interoperability, consensus, scalability, security and various other services will be provided for chains built with Plater. This is the framework the synchro-chain is built on and is a readily available platform for use. Independent developers can build their own synchrochain with this framework. Developers can also power blockchains built with Plater without being in Primal Network.

The synchrochain among its functionalities will have a DeFi ecosystem chain that serves as liquidity pool for innumerable currencies. The interoperability of Synchrochain cuts into diverse of blockchains like Bitcoin, Ethereum, Binance, Polkadot, Tron and several others. Features found in these various blockchains like ZK-snorks for Z-cash, UTXO transactions for Bitcoin, Smart-Contracts for Ethereum and more will be contained in the Primal Chain as plug-ins.

Quick Peak

There are several components that make up the Primal Chain. In fact, the Primal Chain is just a platform for the co-existence of innumerable blockchains and also a foundation for innovative building of novel blockchains as it has an adaptive feature that serve as a "door". Primal Chain will be used by financial institutions, security firms, entrepreneurs for e-commerce, entertainers for distribution, privacy, and so many more.

Circumchain

Serves as the junction of connection and communication for synchrochains and Primal.

Synchrochain

Is an independent chain that is either built or plugged to run on the circumchain.

Radius

Is Like The Synchrochain But Differs A Little As A Temporal Chain Unlike The Synchrochain

Gate

A Passageway For Connecting Primal To Other Blockchains Like Bitcoin, Ethereum, Binance, Tron And Many Others.

Premiers

They Fix Prime, Confirm Proofs From Aggregators And Partake In Consensus

Delegators

They Fix Prime And Select Premiers

Aggregators

They Collect And Transactions, Create Blocks And Proofs For Premiers

Observers

They Watch And Inspect The Network And Report Malicious Activity.

INITIAL TOKEN

The Prime will first be a token on the **Binance Smart Chain**, being a **BEP-20** token. The sales will take place as a **BEP-20** token and be listed on exchanges as that before transition into coin in its native **blockchain**.

Features

Uses

- DeFi projects and/or services
- PRM: for any kind of transaction
- Payment
- Trade
- Investment
- Exchange
- And other financial and daily needs related affairs

TOKENOMICS

Transactions: transaction fee of other currencies besides PRM within Primal Chain is 0.35% of the value transacted which the charges are converted and taken using Flix: a token that can only be accessed in the Primal Chain.

For transaction fee for PRM transactions within Primal Chain is 0.1% of the value transacted which the charges are converted and taken using Flix. Transactions from the Primal Chain to other blockchains transaction fee will be 0.45% of the value of coins transacted which the charges are in PRM.

Revenue is also got from exchanges and various services on offer.

Fixing: for every Flix fixed there will be a monthly return of 0.5% return in PRM on every transaction fees.

Liquidity: being a liquidity reserve supplier allows one to earn 0.15% return of coins equivalent in PRM

Swap: every in-chain (within Primal) swap and/or conversion attracts 0.55% each of the coin values swapped from and to.

ALLOCATION

Funds Allocation

Funds raised from investors and sale will be allocated to the following:

- Development**: 52% will be allocated to development, maintenance, security and infrastructure
- Marketing**: 25% will be allocated to marketing and collaboration
- Administration**: 13% will be allocated to administration
- Founders and Investors**: 7% will be allocated to the founding team and investors
- Miscellaneous**: 3% will be kept for foreseeable needs

Road Map
